

Used Parts for Forklift

Used Parts for Forklifts - Inevitably, forklift parts would eventually wear out and require replacing. The option of acquiring brand new parts could become costly so one more idea is to acquire used parts. This can save a lot of money in the end. It is a good idea to obtain used lift truck components which have been remanufactured. These components will guarantee that you are getting parts that would work for a long time and be productive.

Remanufacturing broken and worn out parts is a cheaper method overall compared to rebuilding. With rebuilding parts, just the parts which are broken or worn out get replaced, which means that other wearable parts could break down soon after acquisition.

Remanufacturing however offers the best assurance for used parts. Reproduced parts are taken apart and cleaned and then all wearable pieces are replaced. All wearable parts are replaced regardless of age or wear which is another reason why remanufactured parts generally perform so much better. Any component within the part is new and this offers much longer life to the second-hand part. Based on the lift truck components which are being redone, the cleaning process and the whole remanufacturing process would vary.

The engines are cleaned after a complete disassembly. Different engine components like spark plugs, pistons, rings, valve springs, filters, and valves can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to ensure that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are disassembled, oven cleaned and pressure washed. A thorough inspection is performed in order to check for any cracks. Bearings, bushings and seals are all replaced. Normally, the replacement components utilized on transmission parts meet OEM specifications.

Certain forklift components such as torque converters, the alternator, the water pump, steer axles and the starter could be quite serviceable after worn components are replaced. The electronic control in the electric forklift is maintained by the control card. This particular card could even be remanufactured with replacing all aged and worn out components. Unlike other forklift components the control card can only have the worn and aged parts replaced.

Remanufactured parts are comprehensively inspected upon reassembly to ensure they are in top condition prior to being sold. It is important when acquiring remanufactured parts to make sure they have undergone the proper testing and inspection procedures. On certain bigger components like for instance engines, transmissions and steer axles, OEM specification replacement parts should be utilized.

The dealer of used lift trucks and components can ensure that the remanufactured components have met OEM specifications and that these components meet industry standards. A lot of details go into remanufacturing second-hand parts. This attention to detail offers more serviceability out of remanufactured components opposed to the components that were merely rebuilt.
